

OUR COMMITMENT TO A BETTER TOMORROW

Trees provide the very necessities of life itself: clean air, clean water, a tolerable climate, healthy communities, and much more. But these life necessities are threatened around the globe.

To address this, we are partnering with the Arbor Day Foundation to help plant 100 million trees in forests and communities worldwide by 2022. It's our way of ensuring the life-giving benefits of trees for future generations.

TREES FOR A HEALTHIER ECONOMY

Forests contribute \$600 billion to the global economy.

Trees save homeowners \$7.8 billion a year in energy costs.

TREES FOR A HEALTHIER ENVIRONMENT

66 million people in the U.S. rely on a National Forest for freshwater.

America's urban trees are removing 711,000 metric tons of air pollution (including ozone emissions, nitrogen dioxide, sulfur dioxide, carbon monoxide, and small particulate matter) annually.

TREES FOR A HEALTHIER SOCIETY

More than a quarter of modern medicines are derived from rain forests.

Access to green spaces helps reduce depression.
